

Graduation Dies

Graduation Dies are roller dies with a graduated inscription, indicating a form of measurement. They are used to mark measurements onto a material.

- Mark measurements onto material
- High volume output
- Marks materials including wire, wood, cable, metal, plastic, rubber and precious metals

Overview

Graduation Dies produce a continuous inscription of graduations onto a material, indicating set measurements. High-quality, consistent marks are indented one section at a time, exerting less pressure on the material surface than other forms of marking.

The die is designed to fit your existing machinery, such as a tool post roll carrier on your lathe. Like other engraving products supplied by Pryor, the artwork, design and layout of both the die and the inscription are provided by our in house team, so that you don't have to.

- Consistent marks
- Lower stress than other forms of marking
- Designed to fit existing machinery

Our Solutions

- Traceability Software & Data Capture
- Automated Part Marking
- Aerospace Marking Standards
- Automotive VIN Marking
- Hand Tools for Marking & Identification
- Serial Number Marking
- Logo Marking Solutions
- Production Data Monitoring
